

SALT CEDAR

B LIST SPECIES

Salt cedar or tamarisk is a noxious tree species that can greatly alter an ecosystem. It can utilize both surface and groundwater which helps it outcompete native plants. It secretes salt into the soil to prevent competitors from growing and the live plants are a greater fire hazard than dead salt cedar. Please report this species to the Weed and Pest Supervisor at (970)264-6773 or via eddmaps.org.

A special thanks to Julie Kraft for the specimen photos.

- *Tamarix parviflora*
- *Tree*
- *Small whitish or pink flowers*
- *May reach heights of fifteen feet*
